SKILLS

TECHNICAL SKILLS

- Programming Languages: JavaScript, TypeScript.
- Frontend: ReactJs, Redux, Bootstrap, Ant Design, SASS/CSS3.
- Backend: ExpressJs, Template engine Pug, Sequelize, Mongoose, Nodemailer, Cloudinary.
- Database: MySQL, MongoDB
- Other: Github, Git Flow, Postman.

SOFT SKILLS

- Communication skills – Clear, concise, and comprehensive work content.
- Self-learning mindset – Curious and eager to explore relevant knowledge and issues.
- Ability to learn quickly.
- Problem-solving skills.
- Time management skills.

OBJECTIVE

"I'm a 4th-year Information Technology student at Duy Tan University, specializing in web development using the MERN stack. My learning approach is project-based, with strong self-study skills and a passion for backend architecture and clean code."
Current Goal: Focus on learning and acquiring new knowledge during my internship to enhance both technical and soft skills.
English goal: 750 Toiec.
Future Goal: Master technical skills and strive for higher positions in my career.

EDUCATION

INFORMATION TECHNOLOGY **2022 - 2026**

Duy Tan University

4th year student - GPA/3.31

PERSONAL PROJECTS

-

E-Commerce Platform

Core Features:

- **Admin Features**: Dashboard admin, User Authorization(RBAC), Manage CRUD Items
- **Payment Integration**: Support for multiple payment gateways (VNPay, Momo).
- **Security**: RBAC, JWT authentication, data encryption, and secure payment handling.
- **Discounts & Coupons**: Apply promotional codes, sales campaigns, and loyalty programs.
- **Shopping Cart**: Add, update, and remove items with real-time price and quantity updates.

Technologies used:

FrontEnd:

Demo: https://project-webshop-reactjs.vercel.app/

Github: https://github.com/bunprodzai/project-webshop-reactjs

- **React.js**: Build dynamic, reusable UI components with modern hooks and component-based architecture.
- **Redux**: Manage global state with predictable data flow and handle async logic using middleware.
- **Ant Design (Antd) - SCSS (Sass) - Tailwind CSS**
- **React Query**: Optimize API integration with caching, background updates, and server-state synchronization.

BackEnd:

Demo: https://project-webshop-api.vercel.app/api/v1

Github: https://github.com/bunprodzai/project-webshop-api

- **Node.js + Express.js**: Build scalable, high-performance backend services with JavaScript runtime.
- **MongoDB**: Design and manage NoSQL databases with Mongoose for flexible data modeling.
- **VNPay, Momo**: Integrate online payment gateway for e-commerce applications.
- **JWT (JSON Web Token)**: Implement secure authentication and authorization mechanisms.
- **Utilities**: Dotenv, Nodemailer, MD5, OpenAI, ...

HOBBIES

Programming, music, swimming, walking and gaming

-

QR Code Ordering System

The project simulates a restaurant's table-top ordering system, where customers can view the menu, place orders, track order status, and pay online on the spot. The system supports real-time communication between customers, waiters, and administrators via Socket.IO, ensuring that any changes to dishes, prices, quantities, or order status are updated instantly.

Core Features:

- **Admin Features**: Dashboard admin, Manage CRUD Items
- **Payment Integration**: Support for multiple payment gateways (VNPay).
- **Realtime Interaction:** Real-time updates for order status, menu prices, and item availability.
- **Socket.IO** enables instant communication between clients and server.

Technologies used:

FrontEnd:

Github: https://github.com/bunprodzai/client-ordering-system

- **React.js** – Build dynamic and reusable UI components using a modern, component-based architecture.
- **Redux + Redux Thunk** – Manage global state with predictable data flow and handle async operations.
- **Socket.IO Client** – Enable real-time data communication with the backend.
- **UI Frameworks:** Ant Design, Tailwind CSS, and SCSS (Sass) for a responsive and elegant interface.

BackEnd:

Github: https://github.com/bunprodzai/server-ordering-system-typescript

- **Node.js + Express.js** – Build high-performance, scalable RESTful APIs.
- **MongoDB + Mongoose** – Flexible NoSQL database design with schema-based data modeling.
- **Socket.IO** – Real-time connection handling between clients and the server.
- **VNPay Integration** – Secure online payment gateway.
- **Utilities:** Dotenv, Cookie Parser, CORS, JWT Authentication, QR Code Generation, Nodemailer.
