Dương Tấn Hòa

Web Developer

0799435534 ttanhoa263@gmail.com https://bunz-portfolio.vercel.app/ Quận Thủ Đức, TP HCM

CAREER GOALS

I graduated with a degree in Information Technology from Duy Tan University, specializing in web development using the MERN stack. I have a project-based learning approach, strong self-study ability, and a keen interest in backend development and clean code practices.

In addition, I have basic knowledge of computer systems, including operating systems, networking fundamentals, and troubleshooting. I am interested in learning how systems work in real environments and supporting users in resolving technical issues, which motivates me to explore opportunities in IT Helpdesk alongside development.

Current Goal: To gain hands-on experience during my internship, improve my technical knowledge, and develop essential soft skills such as communication, teamwork, and problem-solving.

Future Goal: To build a strong technical foundation and gradually grow into a professional who can contribute effectively in either web development or IT support roles.

EDUCATION

Duy Tan University **2022 - 2026**

Information Technology

GPA: 3.31
Toiec: 530

SKILL

Technical skills	• Programming Languages: JavaScript, TypeScript. • Frontend: ReactJs, Redux, ReactQuery, Bootstrap, Ant Design, SASS/CSS3, Pug. • Backend: ExpressJs, Sequelize, Mongoose, Nodemailer. • Database: MySQL, MongoDB • Other: Github, Git Flow, Postman, Cloudinary.
Soft skills	• Communication skills – Clear, concise, and comprehensive work content. • Self-learning mindset – Curious and eager to explore relevant knowledge and issues. • Ability to learn quickly. • Problem-solving skills. • Time management skills.

PROJECT

E-Commerce Platform -

Fullstack

Core Features:

- **Admin Features**: Dashboard admin, User Authorization(RBAC), Manage CRUD Items
- **Payment Integration**: Support for multiple payment gateways (VNPay, Momo).
- **Security**: RBAC, JWT authentication, data encryption, and secure payment handling.
- **Discounts & Coupons**: Apply promotional codes, sales campaigns, and loyalty programs.
- **Shopping Cart**: Add, update, and remove items with real-time price and quantity updates.
- **Chatbot AI:** n8n, RAG, NPL, OpenAI GPT, Pinecone

Technologies used:

FrontEnd:

Demo: https://project-webshop-reactjs.vercel.app/

Github: https://github.com/bunprodzai/project-webshop-reactjs

- **React.js**: Build dynamic, reusable UI components with modern hooks and component-based architecture.
- **Redux**: Manage global state with predictable data flow and handle async logic using middleware.
- **Ant Design (Antd) - SCSS (Sass) - Tailwind CSS**
- **React Query**: Optimize API integration with caching, background updates, and server-state synchronization.

BackEnd:

Demo: https://project-webshop-api.vercel.app/api/v1

Github: https://github.com/bunprodzai/project-webshop-api

- **Node.js + Express.js**: Build scalable, high-performance backend services with JavaScript runtime.
- **MongoDB**: Design and manage NoSQL databases with Mongoose for flexible data modeling.
- **VNPay, Momo**: Integrate online payment gateway for e-commerce applications.
- **JWT (JSON Web Token)**: Implement secure authentication and authorization mechanisms.
- **Utilities**: Dotenv, Nodemailer, MD5, OpenAI, ...

QR Code Ordering System -

Fullstack

Core Features:

- **Admin Features**: Dashboard admin, Manage CRUD Items
- **Payment Integration**: Support for multiple payment gateways (VNPay).
- **Realtime Interaction:** Real-time updates for order status, menu prices, and item availability.
- **Socket.IO** enables instant communication between clients and server.

Technologies used:

FrontEnd:

Github: https://github.com/bunprodzai/client-ordering-system

- **React.js** – Build dynamic and reusable UI components using a modern, component-based architecture.
- **Redux + Redux Thunk** – Manage global state with predictable data flow and handle async operations.
- **Socket.IO Client** – Enable real-time data communication with the backend.
- **UI Frameworks:** Ant Design, Tailwind CSS, and SCSS (Sass) for a responsive and elegant interface.

BackEnd:

Github: https://github.com/bunprodzai/server-ordering-system-typescript

- **Node.js + Express.js** – Build high-performance, scalable RESTful APIs.
- **MongoDB + Mongoose** – Flexible NoSQL database design with schema-based data modeling.
- **Socket.IO** – Real-time connection handling between clients and the server.
- **VNPay Integration** – Secure online payment gateway.
- **Utilities:** Dotenv, Cookie Parser, CORS, JWT Authentication, QR Code Generation, Nodemailer.
